INTRODUCTION

Dynamic Web Projects are used to create web applications using Eclipse IDE and Apache Tomcat server. Eclipse IDE provides an environment to create and execute web applications easily. In this project, Java JDK, Eclipse IDE, and Apache Tomcat server are configured successfully to run a basic web application.

SOFTWARE REQUIREMENTS

Software	Version
Java JDK	17 or 21
Eclipse IDE	Enterprise Java Edition
Apache Tomcat	Version 10
Operating System	Windows 10/11

STEP 1: DOWNLOAD AND INSTALL JAVA JDK

Steps

1. Open browser.
2. Search "Java JDK download".
3. Open Oracle official website.
4. Download JDK 17 or JDK 21 Windows x64 Installer.
5. Open downloaded setup file.
6. Click Next.
7. Click Next again.
8. Click Close.

STEP 2: CHECK JAVA INSTALLATION

Steps

1. Open Command Prompt.
2. Type the following command:

java -version

3. Press Enter.
4. Java version will be displayed.

Example Output:

java version "21"

STEP 3: DOWNLOAD AND INSTALL ECLIPSE IDE

Steps

1. Open browser.
2. Search "Eclipse IDE download".
3. Open Eclipse official website.
4. Download Eclipse Installer.
5. Open installer.
6. Select "Eclipse IDE for Enterprise Java and Web Developers".
7. Click Install.
8. Wait for installation.

STEP 4: SELECT WORKSPACE IN ECLIPSE

Steps

1. Eclipse workspace window will appear.
2. Select workspace location.

Example:

C:\Users\YourName\eclipse-workspace

3. Click Launch.
-

STEP 5: DOWNLOAD APACHE TOMCAT SERVER

Steps

1. Open browser.
 2. Search "Apache Tomcat download".
 3. Open Apache Tomcat official website.
 4. Download Tomcat 10 Windows 64-bit zip file.
-

STEP 6: EXTRACT TOMCAT SERVER

Steps

1. Go to Downloads folder.
2. Right click Tomcat zip file.
3. Click Extract All.
4. Select extraction location.

Example:

C:\Tomcat

5. Click Extract.

STEP 7: CONFIGURE TOMCAT SERVER IN ECLIPSE

Steps

1. Open Eclipse IDE.
2. Click:

Window → Show View → Servers

3. Servers tab will open.
4. Right click inside Servers tab.
5. Click:

New → Server

6. Select:

Apache → Tomcat v10.0 Server

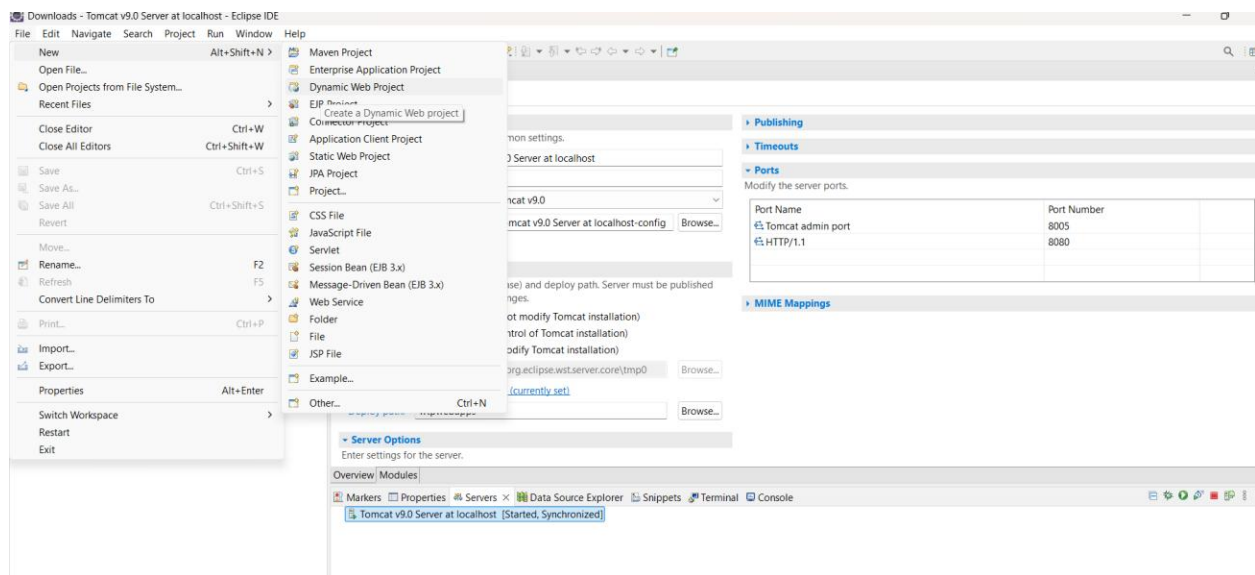

7. Click Next.
8. Click Browse.
9. Select Tomcat extracted folder.
10. Click Finish.

STEP 8: CREATE DYNAMIC WEB PROJECT

Steps

1. Open Eclipse IDE.
2. Click:

File → New → Dynamic Web Project

3. Enter Project Name:

ServletDemo

4. Select Target Runtime:

- Apache Tomcat v10.0

5. Click:

Next

6. Click:

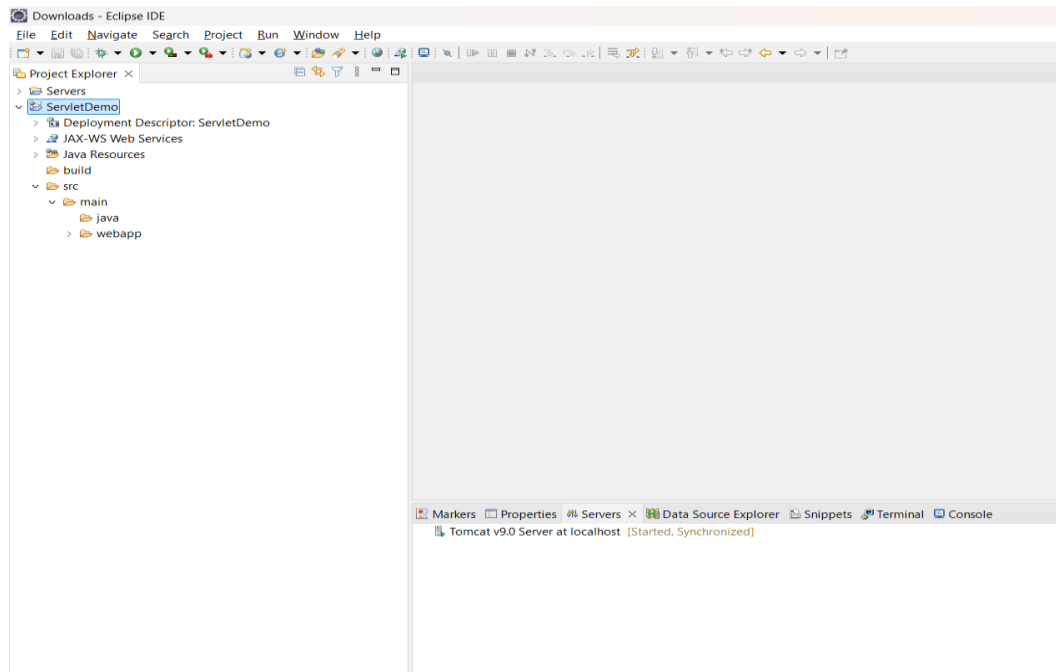

Next

7. Tick the option:

Generate web.xml deployment descriptor

8. Click:

Finish

STEP 9: CREATE HTML FILE

Steps

1. Expand project folder.
2. Open:

src → main → webapp

3. Right click on:

webapp

4. Click:

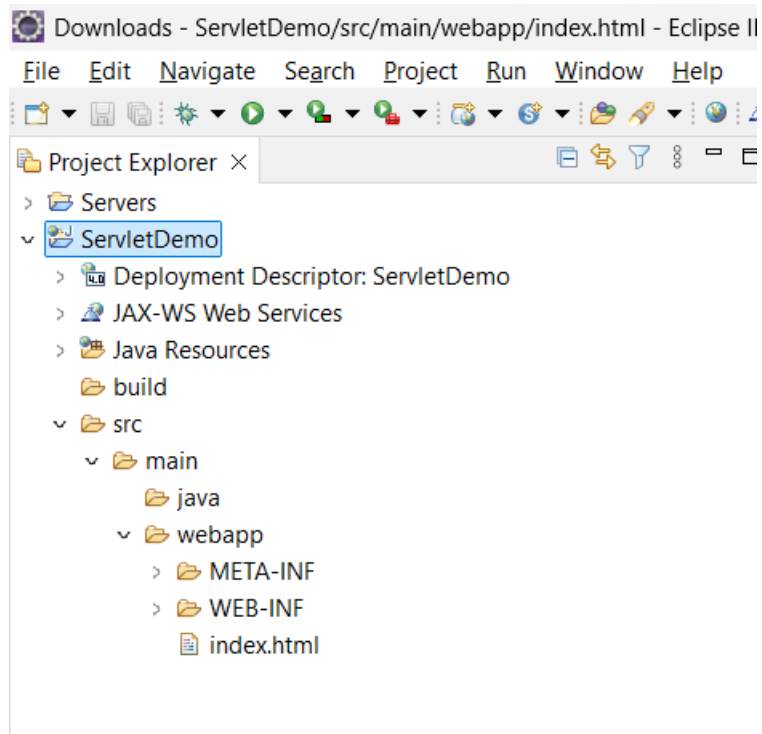

New → HTML File

5. Enter File Name:

index.html

6. Click:

Finish

STEP 10: WRITE HTML CODE

HTML Code

```
<!DOCTYPE html>

<html>

<head>

<meta charset="ISO-8859-1">

<title>Hello World Demo</title>

</head>

<body>

    <h1>Hello World</h1>

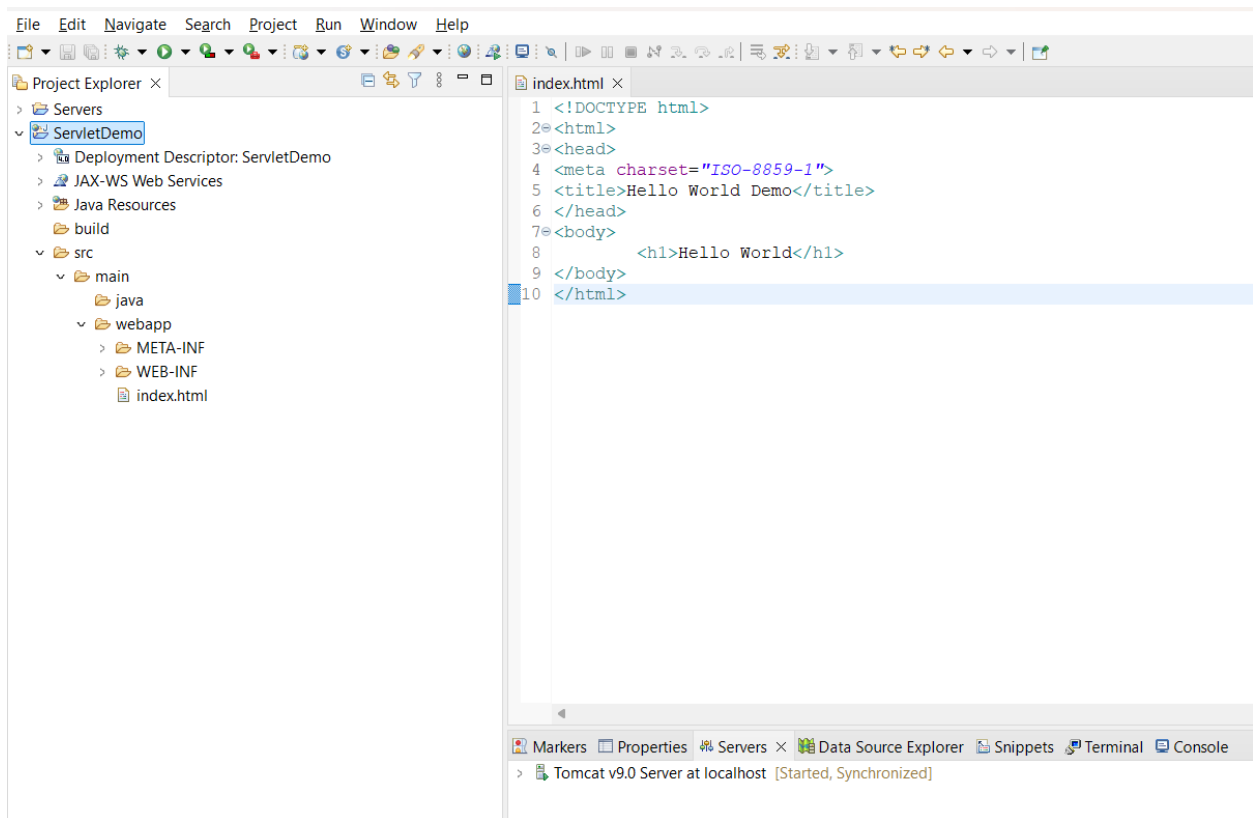

</body>

</html>
```

Steps

1. Delete existing code if any.
2. Paste above code.
3. Save file using:

Ctrl + S

STEP 11: RUN PROJECT ON SERVER

Steps

1. Right click project.
2. Click:

Run As → Run on Server

3. Select:

- Apache Tomcat Server

4. Click:
Finish

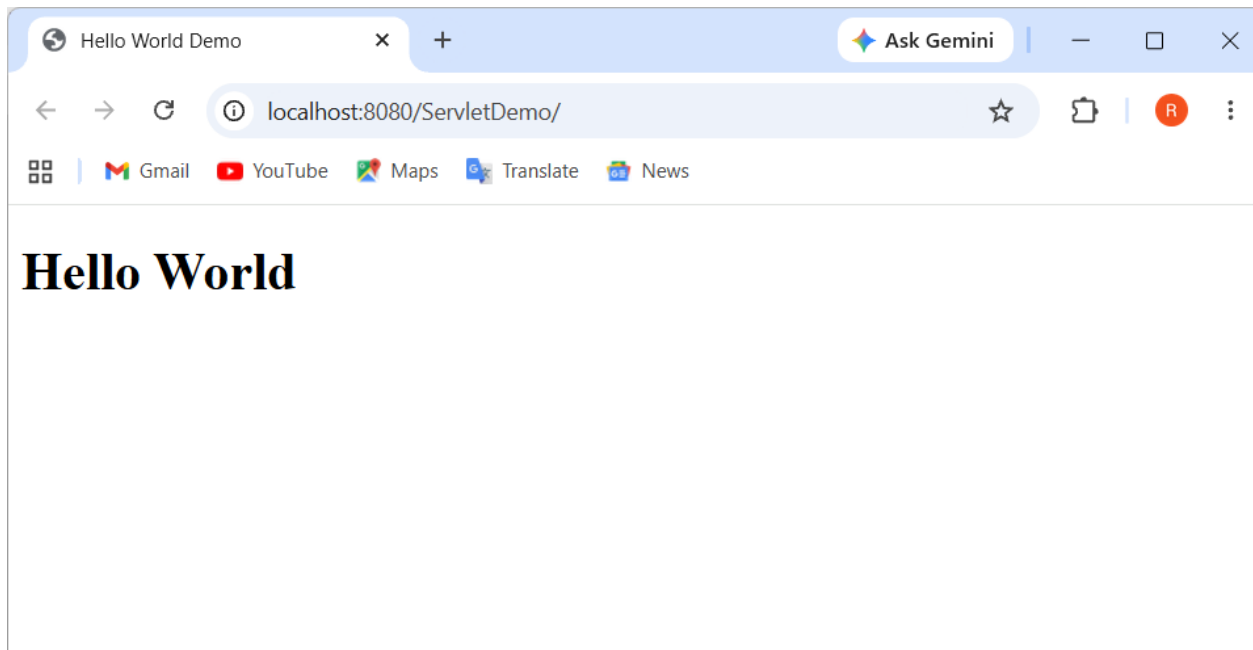

STEP 12: VIEW OUTPUT

URL

<http://localhost:8080/ServletDemo/>

Output

Hello World

STEP 13: PROJECT STRUCTURE

Folder	Description
---------------	--------------------

src	Contains Java files
-----	---------------------

webapp	Contains HTML files
--------	---------------------

WEB-INF	Configuration files
---------	---------------------

lib	Jar files
-----	-----------

CONCLUSION

The Dynamic Web Project was created successfully using Eclipse IDE and Apache Tomcat server. An HTML file was added to the project and executed successfully on the server. The output “Hello World” was displayed successfully in the browser.

THANK YOU!
